VOLUME 11, ISSUE 5.

May 2016

May springs forth manifesting a month full of events.

Plato, Cayce and Spiritual Principles Expressed in Atomic Geometry

By Jane Sandley

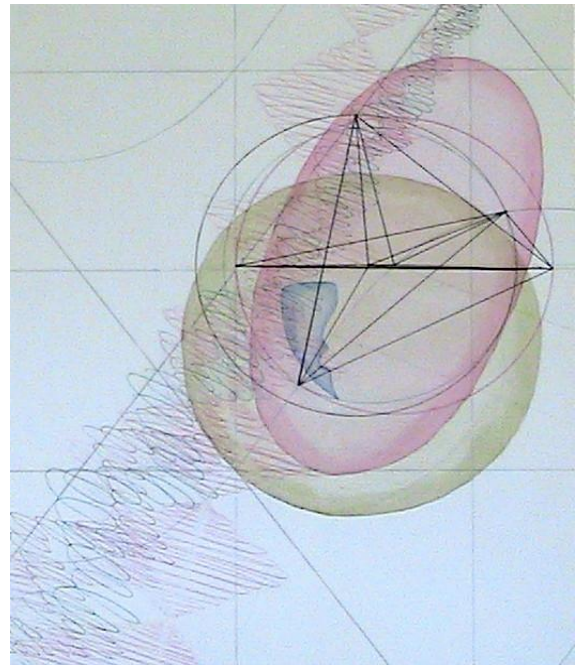

The ancient Greeks used the word Atom to refer to the smallest particle of matter. When modern science determined that the natural elements were made of permanent particles, those particles were called atoms and people thought that they had discovered the atoms that the ancient Greeks had talked about. Today we consider that each atom is composed of a variety of different particles each all in motion yet hold together to create natural chemical elements.

All these particles though in constant movement are held together in geometric configurations in such a way that they are the building blocks of the manifested universe. This the Greeks recognised although it is unclear whether the Greeks were talking about the particles that constitute what we call atoms rather than the atoms themselves.

Plato advocated that the physical properties of matter are built on its geometrical components which in turn are built on simple triangles. The geometry of the triangle is based upon three points. The simplest arrangement of 3 points being the equilateral triangle. Plato considered this to be the basis for any and all materiality. In spiritual terms the equilateral triangle is associated with the Holy Trinity – Father, Son and Holy Ghost each showing at one of the 3 points. As such they demonstrate their equality and individuality whilst at the same time being an expression of one force.

What then of the scalene triangle where the 3 sides are unequal. Is the difference between the two triangles only in form? If so the scalene triangle is still an expression of the trinity, one that presents the idea of variability throughout the material world.

Could the material world take these geometric forms for the purpose of expressing and reminding us of universal truths? Edgar Cayce certainly advocated the idea that matter is the expression of spirit in motion but can we really conceive that Plato's triangles manifested in the atomic world are a manifestation of God? One might accept the idea intellectually but Cayce suggested that the idea was merely a guide. Only by experiencing the Christ way of living can we contemplate oneness with the universe.

Unification: Courtesy of Jay Risdon

The circle is the form regarded as the most universal symbol, showing both the wholeness of creation and the symbolism of the sun. It is a representation of the totality of nature's manifestations also representing the complete cycle of evolution in which all things pass through materiality and then return to their origin (the father). The circle could also be seen as the embodiment of the story of the Prodigal Son. In scientific terms the circle can be related to the curvature of space and time as well as the law of the conservation of energy.

The square manifests truths not necessarily flowing from the triangle yet within the square is found all forms of the triangle. The Law of Cause and Effect is exemplified by the square (the sum of the squares), the truth that can be termed the law of sequences and equality which states that the outcome is equal to the cause. This might be expressed as $E=mc^2$. The square bears within itself all the potentials of the triangle as well as exemplifying many other truths such as closed thought, the end and equality.

Atoms group together to form elements which we classify in the periodic table, their properties and characteristics quantified through the mathematical precision dictated by the laws governing physical manifestation to give us the various concepts that we become aware of in the physical world.

If these forms are representations of the universal laws we have the opportunity accelerate our understanding by considering the underlying laws and principles rather than merely focussing upon the manifested form.

Book Review: Extraterrestrial Sands

By Gary Gilligan

Quartz sand is anywhere and everywhere imaginable on the surface of the Earth. It forms the vast sandy Sahara and Arabian deserts, where dunes can reach a staggering 180 meters (600 ft) in height. It makes up the world's immense sandstone deposits, forms our beaches and is present in most soils around the globe.

The question is: where did all the sand come from? All scholars hold the view that the primary source of our sand lies with the weathering and erosion of granite outcrops – a process that is said to take billions of years (uniformitarianism). But is this correct? Is there anybody brave enough to challenge this seemingly impregnable bastion of geological principles? Extraterrestrial Sands does just that.

Extraterrestrial Sands dismantles the consensus model and explores the radical idea that sand is extraterrestrial in origin. The theory states that the planet Mars entered into hundreds of catastrophic close encounters with earth during historical times. During these encounters an

incandescent molten Mars internally convulsed and ejected immeasurable quantities of vaporised rock, volatiles, dust and debris out into space – a natural by-product of planetary chaos. Vast swaths of rock vapour fell to earth (along with tons of other sedimentary material) where it condensed out of the atmosphere as tiny quartz grains. In other words, it rained sand! Earth has been subjected to a number of catastrophic sand and debris 'accretion events' in the past few thousand years and the evidence is obvious for all to see. It reaches us in the form of Earth's sandy deserts, beaches, dune fields and sandstone deposits.

If proven, the theory laid out in Extraterrestrial Sands has the potential to rewrite Earth's history. A fascinating read, it will appeal to those with an interest in global and Martian geology.
